Art Unit: 1753

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-47, drawn to a method for deriving electrical output from solar radiation, classified in class 136, subclass 246.
- II. Claims 48-59, drawn to a system for deriving an electrical output from solar radiation, classified in class 136, subclass 246. Please note that dependent claims 50-59 depend from claims 48 or 49, which recite said system. Said claims 50-59 improperly recite "The method" in their respective preamble because claims 48 and 49 are drawn to the system, not a method. Claims 50-59 have been grouped with the system claims because said 48 and 49 are system claims.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group II and Group I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process of using that product, such as one where no components of solar energy are removed, but rather the solar energy impinges directly on the photovoltaic cells. Furthermore, the product as claimed can be used in a materially different process of using that product, such as in a thermophotovoltaic process where, instead of using solar radiation, the radiation emitted

Art Unit: 1753

from a ceramic thermophotovoltaic emitter is used as the radiation source.

Furthermore, the product as claimed can be used in a materially different process of using that product, such as one wherein, instead of using solar radiation, alpha or beta radiation is used as the radiation source. Alternatively, the process for using the product as claimed can be practiced with another materially different product, such as photovoltaic cells that are parallel connected instead of series connected.

- 3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
- 4. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.
- 5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alan Diamond whose telephone number is 571-272-1338. The examiner can normally be reached on Monday through Friday, 5:30 a.m. to 2:00 p.m. ET.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam Nguyen can be reached on 571-272-1342. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
